

OIL SPILL VANISH

INSTRUCTIONS:

OIL SOLUTIONS POWDER: For pooled spills or spills in water

1. Apply Oil Solutions Powder evenly over spilled oil.
2. Let stand for 5 minutes on hard surfaces, and 20 minutes on water.
3. Scrape or sweep up the solids and dispose. Can be safely thrown away in the garbage.
4. For spills on hard surfaces, proceed to steps 1 and 2.

OIL SOLUTIONS STEP 1 and 2: For spills on hard surfaces and soils

1. For best results, apply with a brush or broom.
2. Pour or Spray Oil Solutions STEP 1 on any kind of hydrocarbon spill; use a 1:1 ratio of Step 1 and 2.
3. Once entire spill is in contact with Step 1, immediately apply Oil Solutions STEP 2. Make sure that Step 2 contacts all of Step 1.
4. The original spill is now permanently encapsulated in the OIL SOLUTIONS patented "green" technology. Let dry for at least one hour.
5. Repeat if necessary.

Notes:

- Results may vary, depending on the size and location of the spill.
- When applying Oil Solutions Powder, please note that any excess powder will remain white on top of the surface. This excess powder maybe swept up and re-used.
- For older stains, this process may need to be repeated a few times until the stain is completely removed.
- Steps 1 and 2 may leave a white residue. This will eventually disappear after a few months.
- Instructions are to be used as a guide only.
